

Tableau de détermination du diamètre du flexible · Chart to Determine the Hose Diameter

This chart shall assist you to choose the necessary hose size "ID" depending on the flow quantity. The values do not take into consideration the pressure drop caused by the friction within the hose.
To establish the pressure drop see the chart on page 104.

EXAMPLE:
Determine the inner diameter of a hose "ID". The flow rate "Q" is 250 litres per minute (l/min). The flow velocity "V" is not to exceed 4 metres per second(m/s) for safety reasons.

SOLUTION:
The dotted line between Q and V gives the correct ID of the hose, in this case 38 mm.

***) PLEASE NOTE:**
In case of danger of electrostatic charges the following flow velocities should not be exceeded:

ID 25 mm =	5 m/s
ID 50 mm =	3,5 m/s
ID 100 mm =	2,5 m/s
ID 200 mm =	2 m/s

In practice these velocities can be exceeded considerably if there is no danger of electrostatic charges when e.g. a safe earthing is applied of fuel additives are used that prevent the charging.
